BASKETBALL RIMS

Rims are made of 5/8” cold rolled steel formed to make an 18” inside diameter ring

Steel brace over 50% of the ring circumference for maximum strength

Net Attachment

Easy Glide™

Ram Horn™

Mounting Plate for 5”x5”, 5”x4”, or Universal Rims

Coiled steel configuration for secure and easy attachment

57” co-polymer cable slides through tubes on bottom perimeter of steel ring

Breakaway or flex mechanism - see below illustration for rim distinction

Reflex mechanism available in breakaway or flex goals - located under rim or on top plate

Net is included with each goal

G O A L  D I S T I N C T I O N

POSITIVE LOCK BREAKAWAY GOALS - Positive lock goals are spring loaded to withstand a specific amount of force applied to the rim before they automatically release and pivot downward. The amount of force required to release the goal is adjustable. Once the force is removed, the rim will return to play position.

FLEX BREAKAWAY GOALS - Flex breakaway goals are spring loaded but do not include the positive lock mechanism, therefore there is no force threshold required to move the rim. Increasing the force load will cause the rim to travel farther away from play position. Once the force is released, the rim will automatically return to play position.

FIXED GOALS - Fixed goals are made of a hard-wearing steel that will not flex or breakaway, but stay strong through repetitive use.
